                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              immunoassays, as components or as target sites for various therapies. Antibodies directed against at least one epitope contained within these polypeptides are useful as delivery agents for therapeutic agents, in diagnostic tests and for screening for conditions or diseases associated with CS 198, particularly cancer. Monoclonal antibodies may also be used for the generation of chimeric antibodies for therapeutic use. The CS 198 polynucleotide is also useful in gene therapy and drug screening. The method of the invention provides an alternative, non-surgical diagnostic method capable of detecting early stage GI tract disease such as cancer. The present sequence is human CS 198 polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human; cytokine; cell proliferation; cell differentiation; gene therapy; vaccine; peptide therapy; stem cell growth factor; haematopoiesis; tissue growth factor; immunomodulatory; cancer; leukaemia; nervous system disorder; arthritis; inflammation.
The invention relates to polynucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAM78323-AAM80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             05-FEB-2001;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 09-AUG-2001

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CS198 polynucleotide in a test sample. The method comprises contacting the test sample with at least one CS198 specific polynucleotide or its complement, and detecting the presence of the target CS198 polynucleotide in the test sample, where the CS198-specific polynucleotide has at least 50% identity to a polynucleotide having any of the 27 fully defined sequences of 34-2894 bp (S1-27) given in the specification, or their fragments or complements. The composition and methods are useful in diagnosing, staging, monitoring, prognosticating, preventing or treating, or determining the predisposition of an individual to, diseases and conditions of the gastrointestinal tract, e.g. cancer and in gene therapy. This is the predicted amino acid sequence of the human CS198 protein derived from the CS198 consensus sequence shown in seq id 27.
                                                                                                                                  coding sequences (ADG14340-ADG14345). The coding sequences are useful for detecting and screening proliferative insulin-producing cells as well as differentiation and proliferation of such cells and their precursors as analogous cells in treatment of e.g. PHHI and diseases due to differentiation/proliferation abnormality, diseases of the nervous system and pancreas. The coding sequences are also useful as spontaneous proliferation models of pencreas beta-cells. The novel genes NC1, NC2 and NC3 were isolated from the pancreas of PHHI patients, which were used in testing for the detection of proliferative insulin-producing cells or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       06-MAR-2003; 2003WO-JP002620.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human NC2

                                                                The invention relates to reagents and methods for detecting diseases of the gastrointestinal (GI) tract. The method involves detecting the presence of target CS198 polynucleotide in the test sample. The methods and compositions of the present invention are useful for the diagnosis, prevention and/or treatment of diseases or conditions associated with abstrant expression or activity of the CS198 polypeptide, such as cancer of the gastrointestinal tract. These are also useful in gene therapy. The present sequence is a CS198 protein used to illustrate the method of the
                                                                                                                                                                                                                                                                                                                                                         Diagnosing diseases such as cancer of the gastrointestinal tract, detecting aberrant expression or activity of the CS198 polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        31-MAR-1997;

 22222222111
                                                                                                                                                                                                                                                                                                                               Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                    Score

    Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                        558558

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Total number of hits satisfying chosen parameters:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Score

Sequence 32256, Application US/09252991A
Patent No. 6551795

GENERAL INFORMATION:
APPLICANT: Marc J. Rubenfield et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS TITLE OF INVENTION: ARRUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: 107196.136
CURRENT APPLICATION NUMBER: US/09/252,991A
CURRENT FILING DATE: 1999-02-18
PRIOR APPLICATION NUMBER: US 60/074,788
PRIOR FILING DATE: 1998-07-27
PRIOR FILING DATE: 1998-07-27
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  EARLIER
